

AUTUMN 2018

## # the unteachables #

The Erasmus+ project The Unteachables was granted summer 2018. The mission of the project is to help the new generations of young teachers turn “unteachable” 21<sup>st</sup> century young students into “learnables” - through exploring radically different open schooling learning strategies to replace outdated academic classroom teaching. The project is coordinated by Absalon University College from Denmark. *Curious?* Contact us for more...

## # open science schooling #

The Erasmus+ project Open Science Schooling is now entering the second year. The project mission is to explore real-time and real-life science engagement in the community - creating valuable science missions for 21<sup>st</sup> century secondary school students. The project aims to help create new images of science among young students to encourage them to engage or re-engage in science. The project is coordinated by the University of Eastern Finland. *Curious?* Contact us for more...

## # missions based learning #

During the many projects Working with Europe has been and are engaged in with young students, we have come to develop what we believe to be a serious alternative to outdated academic teaching. We call our approach Mission Based Learning - inspired not only from European experience, but also from leading learning pioneers like Marc Prensky.

Take a look at the [brief presentation](#). And visit [Marc Prensky](#).

## # new Working with Europe services #

Working with Europe is now offering new services - responding to our need to reduce traveling across Europe to the many projects we are engaged in.

One of the new services is to produce Erasmus+ applications within Working with Europe being a partner in the project. The services are delivered on very fair conditions.

You might wish to take a look at the [new services here](#).

## # new erasmus+ initiatives 2019 #

Working with Europe is launching a number of highly innovative new Erasmus+ initiatives to be submitted in March 2019.

The initiatives are closely linked to long-term strategies in the fields of “Open Science Schooling” and “Unteachables but Learnables”. The new applications in these two fields will also serve as building bricks towards European leadership in the fields addressed. More:

## # drivers and coordinators #

In connection with the new Erasmus+ initiatives to be submitted March 2019, we are looking for *dedicated drivers and coordinators* to some of the applications. The idea is that Working with Europe will produce half of the new applications - and dedicated partners will drive the production of the other half.

Should you be interested - start taking a look:

## # collaboration #

Should you wish to collaborate with *Working with Europe* or use us as a driver of new innovative European initiatives, or wish to build European capacity in your organisation, you are welcome to invite us to a dialogue.
